

>> eZ publish offering

WebDeal is one of the world's leading hosting providers of the eZ publish CMS. We have worked closely with eZ systems throughout the years in order to extend our eZ publish know-how and make the best solutions available. This has allowed customers across Europe and other parts of the world to take full advantage of everything this content management system can bring.

Shared hosting

Since 2001, WebDeal has been designing eZ publish hosting solutions for more than 300 eZ publish sites and offering shared hosting solutions that fulfill the needs of companies adopting eZ publish.

We deliver maximum performance through advanced PHP accelerators and additional memory per site. Additionally, enterprise software such as SuSE Linux Enterprise Server and high quality IBM hardware makes us able to create a stable platform for your eZ publish site.

Our staff of technicians has extensive experience with this solution, and knows how to communicate with our customers in the best possible way. Our technical solutions allow us to further guarantee uptime, redundant systems and backup, a high degree of scalability and strong data security.

Dedicated and managed hosting solutions

Even if your company's needs exceed what our shared hosting plans can offer, WebDeal will still be your best choice for eZ publish hosting with our dedicated solutions.

We offer standard configurations with the best machines from IBM's System x and System p, as well as other offers - all customised specially for eZ publish. Our systems can run stably and reach the highest levels of performance, fine-tuned to suit your specific needs.

We also provide a unique guarantee to make no changes or upgrades in our hosting platform that could break the compatibility with your eZ publish installation.

WebDeal hosts eZ publish solutions with some of the heaviest traffic in the Internet on dedicated systems. Our references include the Miss Norway contest and Babymedia AS.
