

## » The perfect triangle

IBM is one of the most recognized hardware vendors in the world.

eZ systems develops eZ publish, the leading Open Source enterprise content management system in the market today.

WebDeal is the world's leading specialist in eZ publish hosting solutions.

Together, these three providers form an unbeatable team that helps businesses of all sizes explore their full potential!

Using IBM's flexible, scalable and highly available servers, WebDeal is able to put together highly stable platforms for running eZ publish sites.

### IBM ServerProven

IBM ServerProven is a program that validates hardware and software products for compatibility with System x servers and other IBM machines. Each vendor's equipment is tested thoroughly with IBM's in order to address compatibility issues before they affect customers.

Participants of the ServerProven Program work closely with IBM engineers, testing solutions in one or more operating system environments. These efforts result in easier installation and reduced setup time, thus reducing costs.

### eZ publish proven!

As one of the world's leading providers of eZ publish solutions, WebDeal has worked with IBM to validate eZ Systems' CMS on IBM System x. The validation process was a success, which means that eZ publish is guaranteed to run cost-effectively and stably on the System x servers that WebDeal offers.

WebDeal has implemented eZ publish as a key element in our company's business strategy and has acquired specialised knowledge in hosting solutions based on eZ publish. Quality assurance of the service stack as a whole is made possible through close cooperation with eZ Systems and its partners network on a global basis.
